

RAHUL RAMAGIRI

MAIL ID: rahulramagiri27@gmail.com

MOBILE: +91 8555819530

Professional Summary:

- 5.10+ years of experience as a Full-Stack Developer with primary expertise in Python, Django, and FastAPI for backend development.
- Specialized in building secure, privacy-compliant applications with PII detection, masking, and conversion pipelines using regex and Microsoft Presidio.
- Strong knowledge of Python 3, modular backend design, text analysis, data processing, logging, and auditability.
- Designed and maintained high-performance REST APIs with async support, validation, and OpenAPI/Swagger integration.
- Experienced with database systems like PostgreSQL and Azure SQL, including large-scale data handling and optimization.
- Implemented authentication & authorization (JWT, role-based access control) across backend and frontend layers.
- Secondary expertise in React.js, TypeScript, and Tailwind CSS, developing dashboards, admin panels, and PII visualization UIs.
- Proficient in handling complex forms, validations, and state management with React Hooks, Redux, and Context API.
- Integrated frontend with FastAPI services using Axios/Fetch for secure data exchange.
- Experienced in CI/CD pipelines (GitHub Actions), and environment management.
- Integrated third-party services: authentication providers, email, charts (Recharts/Chart.js), and file export tools.
- Exposure to cloud platforms (Azure, AWS) for database and application deployments.

Technical Skills:

Architecture & Framework	MVC, MVM (single page Applications)
Backend Frameworks	FastAPI, Django
Programming & Scripting Languages	JavaScript (ES6+), TypeScript, HTML5, CSS3, Python (for integration), JSON
Frontend Frameworks & Libraries	React.js, Vue.js (Basic), Bootstrap, Tailwind CSS

API & Integration	RESTful APIs, HTTP, Axios, Fetch, FastAPI
Testing & Debugging	Jest, React Testing Library, Chrome DevTools, Postman
Package & Build Tools	NPM, Yarn, Webpack, Babel, Vite
Development Tools	VS Code, Postman, Chrome DevTools, Git, JIRA
Version Control	Git, GitHub, GitLab
Delivery Methodology	Agile (Scrum), Waterfall
Platforms & OS	Windows, Linux & Mac
CI/CD & Deployment	GitHub actions, Docker

Education:

- B. TECH from JNTUH in Electronics & Communication Engineering - Kshatriya college of Engineering - Nizamabad District in 2019.
- Diploma from SBTET in Electronics and Communication Engineering - Kshatriya college of Engineering - Nizamabad District in 2016.
- SSC from Board of Secondary Education from Chaitanya High School - Nizamabad in 2013.

Work Experience:

Working with Bilvantis Technologies LLP, Hyderabad as Senior Programmer Analyst from Jan 2024–Till Now.

Worked with ITCrats Info Solutions Pvt Ltd, Hyderabad as Python Developer (Associate) from Aug 2020 to Jan 2024.

Project:

Project:

Project #1: PII Masking Tool

Client	: Trigyn (Equitable)
Role	: Senior Programmer Analyst
Application	: Data Privacy & Compliance Portal
Environment	: React.js, Python, FastAPI, Django, Microsoft SQL, GitHub
Duration	: Aug 2025 – Till date

Project Description:

PII Masking Tool is a secure data management platform designed to convert sensitive production data into non-production datasets by applying PII detection, masking, and conversion techniques. The system ensures compliance with privacy regulations by leveraging hashing, Faker library, and Microsoft Presidio for masking sensitive attributes. The platform provides a React.js-based UI for data visualization and masking configuration, while a FastAPI backend manages data pipelines, API integrations, and audit logging.

Roles and Responsibilities:

- Designed and developed full-stack application using React.js (UI) and FastAPI (Backend).
- Implemented PII detection and masking pipelines using hash functions, Faker, and Microsoft Presidio to anonymize sensitive production data.
- Integrated with production PostgreSQL/Azure SQL databases for secure data extraction and transformation into non-prod environments.
- Built interactive React.js dashboards for PII visualization, data masking workflows, and admin configurations.
- Developed REST APIs for data processing, validation, and job management with async support.
- Ensured role-based authentication and authorization for secure data access.
- Containerized backend services using Docker for consistent deployment across dev, test, and cloud environments.
- Implemented logging and audit trails for all masking activities to ensure compliance with internal security policies.
- Documented end-to-end system workflows, deployment steps, and user guides for internal teams.

Project #2: NeoAI VS code extension

Client	: LTM (HSBC)
Role	: Senior Programmer Analyst
Application	: Developer Portal.
Environment	: Visual Studio Code, Reactjs, python, GitHub, mongoDB
Duration	: Nov 2024 – Till date

Project Description:

AI Assistant for VS Code is an advanced developer productivity extension that integrates intelligent code review, explanation, and AI-powered assistance directly into the VS Code editor. It provides seamless interaction between frontend (React-based UI in Webviews) and backend (FastAPI APIs), enabling developers to analyze, refactor, and secure code with ease.

Roles and Responsibilities:

- Developed a VS Code Extension packaged as a .vsix file, with React.js-based Webview UIs for assistant responses, code explanations, and unit test generation.
- Integrated FastAPI backend to handle API requests, file uploads, and dynamic code analysis.
- Implemented PII detection and masking pipelines using Python, regex, and Microsoft Presidio for secure text and code processing.

- Built extension commands to capture selected code/errors from the editor and route them to backend services for analysis.
- Rendered assistant results (explanations, reviews, test cases) in structured React components inside VS Code Webviews.
- Implemented secure communication between the extension, backend APIs, and webviews using vscode API and message passing.
- Supported file upload (.py, .java, .js) and automated parsing for unit test generation.
- Ensured compliance with VS Code Extension security guidelines and API best practices.
- Used Docker to containerize backend services for consistent local and cloud deployments.
- Packaged the extension into .vsix for internal testing, distribution, and marketplace publishing.
- Documented setup, deployment, and usage guides for both internal teams and end-users.

Project #3: Mes Portal (Manufacturing Execution System)

Client	: Virtues
Role	: Senior Programmer Analyst
Application	: User Based Portal API's
Environment	: Python, Django, Git, Postman & React.js
Duration	: Jan 2024 – Oct 2024

Project Description:

MES (Manufacturing Execution System)
 Developed a real-time manufacturing management platform using Python, FastAPI, and React. Integrated Single Sign-On (SSO) for secure access. The system optimized production planning, quality control, and reporting. Built and deployed microservices using Docker, enabling scalable and efficient operations.

Roles and Responsibilities:

- Designed and developed scalable APIs using Python and FastAPI for seamless integration with frontend and third-party systems.
- Architected and implemented frontend components using React, following reusable and modular patterns.
- Integrated REST APIs and real-time services (WebSockets) for dynamic MES functionalities.
- Containerized applications using Docker to streamline development and deployment processes.
- Built custom UI components and dashboards tailored to MES workflows.
- Implemented state management using Context API / Redux for consistent data handling.
- Collaborated with cross-functional teams to translate manufacturing requirements into actionable software features.
- Followed best practices for code quality, unit testing, and continuous integration.

- Participated in Agile ceremonies and contributed to sprint planning, estimations, and reviews.
- Ensured responsiveness, accessibility, and performance optimization across all frontend modules.

Project #4: Global Payments Migration Project

Client	: Global Payments
Role	: Data Engineer
Application	: Data Migration
Environment	: AWS (RDS, S3), MS Sql Server, Jenkins, GIT, Python
Duration	: Jul 2023 – Dec 2023

Project Description:

The goal of this project is to migrate existing on-prem relational database source data to the cloud data platform. As source data becomes available, the data warehouse for each domain may be developed in AWS RDS

Roles and Responsibilities:

- Requirement gathering and analysis, translating business needs into technical specifications.
- Migrate on-prem SQL Server databases into AWS RDS
- Created SQL Scripts for merging, partitioning and validations.
- Re-defining access model and redesigning data maintenance activities.
- Created/migrated SQL Agent jobs on RDS instance.
- Debugging the issues and fixing them.
- Data Validation in Dev, QA and Production Environments.
- Development of high-quality code, adherence to coding standards, collaboration with team members, and conducting code reviews.
- Maintenance of technical documentation, ensuring accuracy and compliance with standards.
- Participation in Unit Testing, documentation of Unit Test Results.

Project #5: BFL (Bajaj Finance Limited) Merchant Portal.

Client	: Worldline
Role	: Associate Engineer
Application	: Merchant Portal
Environment	: Visual Studio, Postman Tool, PostgreSQL, Python, Django and FASTAPI's, vue.js
Duration	: Aug 2022 – Jun 2023

Project Description:

Phase-1 & Phase-2:

The project involved building a frontend interface to interact with APIs fetching data from various banks under BFL. Each API had a dedicated UI screen for report viewing, user interaction, and dynamic rendering of encrypted/decrypted data. In Phase-2, the frontend was updated to align with upgraded backend services developed using FastAPI for improved performance and encryption handled via AES Crypto.

Roles and Responsibilities:

- Developed modular and reusable Vue.js components to consume APIs and display banking data in tabular and report formats.
- Created dynamic UI screens for each report-generating API, including user-driven filters, sorting, and pagination.
- Integrated Vue.js frontend with Django (Phase-1) and FastAPI (Phase-2) backends using Axios for API communication.
- Handled encrypted request/response payloads and implemented AES decryption in the frontend where required.
- Utilized Vue Router for navigation and Vuex (or Composition API) for centralized state management.
- Implemented loaders, error handlers, and conditional rendering to improve user experience and application reliability.
- Worked closely with backend developers to align frontend request structures with API specifications.
- Followed mobile-responsive design practices using Bootstrap/Tailwind CSS for cross-device compatibility.
- Participated in testing and debugging of API calls, using browser dev tools and Postman to trace issues.
- Used Git and Bitbucket for version control, handling merges, code pushes, and resolving conflicts.
- Documented frontend components, workflows, and edge cases for maintainability.
- Communicated with stakeholders and the client via email to clarify UI issues, feedback, and API integration concerns.

Project #6: Worldline Merchant Portal

Client	: WorldLine
Role	: UI Developer
Application	: Merchant Portal
Environment	: Visual Studio, Postman Tool, PostgreSQL, Python, Django and Vuejs
Duration	: Sep 2021 – Aug 2022

Project Description:

The project aimed to transform Worldline Phase 2 into a dynamic, role-based, full-stack web application. It involved creating a scalable Vue.js frontend integrated with Django-based backend services to handle data aggregation, Excel report generation, and seamless role-based user management. The UI was enhanced to support monthly and duration-based insights, enabling users to interact with large datasets

intuitively. excel files.

Roles and Responsibilities:

- Participated in requirement gathering and analysis, converting business requirements into frontend UI specifications.
- Developed and managed responsive and dynamic user interfaces using Vue.js, JavaScript, Bootstrap, HTML, and CSS.
- Built components for displaying aggregated monthly data and filtering results based on duration-level selections.
- Integrated the frontend with REST APIs using Axios to fetch, display, and manage backend data efficiently.
- Designed dynamic dashboards and Excel download functionality from frontend based on user-selected filters.
- Implemented role-based UI rendering for Phase 2 to ensure users only accessed features relevant to their permissions.
- Worked closely with backend developers to align on data structures, API endpoints, and feature integration.
- Conducted frontend debugging, tested data workflows, and performed UAT to ensure cross-browser compatibility and reliability.
- Collaborated on database interaction via backend (Django + Pandas) to ensure efficient data delivery to Vue components.
- Stored code in Bitbucket and regularly updated work as part of version control best practices.
- Maintained detailed understanding of the functionality by working with design and requirement documents.
- Took ownership of both frontend and backend modules, ensuring consistency in dynamic rendering and data processing.
- Worked end-to-end on transforming the application into a dynamic, role-based platform with real-time capabilities.

Project #7: DataHub Worldline Portal

Client	: Worldline
Role	: Python Developer
Application	: DataHub Merchant Portal
Environment	: Vue.js, VSCode, Python, Django, PostgreSQL
Duration	: Aug 2020 – Sep 2021

Project Description:

Developed a comprehensive web portal with responsive UI for the Merchants, Acquiring Banks, and OEMs. This web portal will facilitate the merchants to log tickets, raise requests, view transactions, download statements and initiate digital (Card less) transactions.

Roles and Responsibilities:

- Requirement gathering and analysis, translating business needs into technical specifications
- Utilized Python, Django, Vue.js to design server applications and client interfaces.
- Evaluated development standards and procedures of engineering processes.
- Managed continuous maintenance and troubleshooting of Python Django projects.
- Handled development and management of front-end user interfaces with help of HTML, CSS, and JavaScript.
- Collaborated with other developers to handle complex issues related with deployment of Django based applications.
- Resolved ongoing problems and accurately documented progress of Python project.
- Designed and configured database and back-end applications and programs.
- Daily updated work, will store in Bitbucket.
